

# Sounds Heavenly

## **Powered Line Cables for Beolab 2 / 7-x / 10 / 2500 Speakers**

Thank you for purchasing a Sounds Heavenly Powered Line Cable for your Bang and Olufsen speakers. This high-quality cable assembly contains an Input Cable (blue), a Splitter Cable (black) and also a precision switch-mode power supply which generates the trigger signals required to allow you to connect a Bang and Olufsen Beolab 2 Subwoofer or Beolab 7-1, 7-2, 7-4, 7-6, 10 Centre Speaker or Beolab 2500 Stereo Speakers directly to a non-B&O music source (via a headphone output or a variable line level RCA output). This cable is suitable for home or professional use and is designed to be left permanently connected to the amplifier and speakers in dry, indoor conditions only. It can be used in any country with an alternating current (AC) mains supply between 110 and 240 volts.

### Fitting Instructions:-

1. Locate the black Splitter cable. This will have an 8 pin male DIN plug fitted. Connect this plug to the socket on your Beolab speaker marked "Powerlink" or "Powerlink Input".
2. If you are using this cable with a pair of Beolab 2500 speakers, you will also need a further Powerlink Splitter and a Powerlink mk.3 cable (not included with this kit) to allow the single output of the powered cable to be connected to both speakers.
3. Locate the blue signal cable and connect this to either a headphone output (minijack) or RCA/phono output (only use audio pre-out sockets which are variable level, ie. volume controlled). The 5 pin DIN plug on this cable connects to one of the two sockets on the black Splitter cable.
4. Locate the power supply and connect the 7 pin DIN plug to the other socket on the black Splitter cable. Turn on the power to your audio system and speakers.
5. When the cable power supply is connected, the speakers will turn on and they will stay on until the cable power supply is disconnected.
6. Sit back and enjoy the music!

**Important note:** Under no circumstances should these cables be connected to fixed level Tape Out or Line Out sockets, or to Audio Out sockets on a TV or DVD player, as these are set at full volume - this can result in serious and expensive damage to the equipment (and probably your ears!)

\* Beolab is a trademark of Bang and Olufsen. This powered cable set is compatible with Beolab products having a Powerlink input mode as indicated above.
